

LIGHT INDUSTRIAL CASE STUDY

AMUSEMENT PARK TRAMS

1 SITUATION

Fiberglass/gelcoat. It cracks, chips and splinters. The maintenance and replacement costs alone can be a huge hit to your bottomline. That once smooth, beautiful finish very quickly deteriorates into an eyesore that can become a liability to customers and workers. Conventional solutions just don't provide durability or longevity. It takes more.

2 PROCEDURE

Depending on the substrate/construction and existing conditions, your LINE-X professional will select the appropriate prep materials and techniques. Little more than cleaning and sanding may be required to remove debris and contaminants. Cracks and holes will be filled or repaired prior to the application of LINE-X. Some jobs may involve more in-depth preparation to ensure a successful application.

3 SOLUTION

A seamless, durable, professionally applied LINE-X coating provides a permanently bonded, non-skid surface. Cracks, chips and splinters are a thing of the past. No additional repairs or replacement required. Reduced maintenance and repair costs, extended life.

4 RESULTS

Dramatically reduced maintenance and repair costs to your equipment. With a permanently bonded, water-tight, abrasion resistant barrier. You will enjoy years of maintenance-free operation and out-of-pocket savings.
